

Ranger for Digital Check's CheXpress CX30 Now Available

--Financial Institutions to take advantage of affordable bank-quality check scanner priced for the small business market--

NORTHFIELD, Ill. and PENSACOLA, Fla., Nov. 17, 2008 – Digital Check, a provider of [desktop check scanners](#) and [remote deposit capture](#) technology to the financial industry, announced [Silver Bullet Technology](#) has now certified and supports Digital Check's CheXpress check scanner with its Ranger[®] API software solution.

The Ranger for CheXpress software provides banks with a powerful, yet cost effective new solution for small business, in addition to their current Ranger-compatible higher-volume branch and remote deposit solutions. Silver Bullet's Ranger software allows customers to use virtually any item-processing software with virtually any check-scanning hardware. The inclusion of Digital Check's CheXpress CX30 allows banks to incorporate this low-volume scanner without replacing their current software solutions.

"We are excited to announce Ranger support for Digital Check's CheXpress CX30," said Bryan Clark, chief executive officer of Silver Bullet. "This new, high performance, yet very affordable scanner provides a practical choice for the small to medium sized RDC customers. Companies already using Ranger will find an effortless integration when adding the CX30 to their scanner portfolio."

"With the certification of CheXpress by Silver Bullet Technology, Ranger-compatible solution providers and financial institutions have a bank-quality scanner at a low price to help accelerate adoption within the small business segment of the market, while maintaining high image quality for the clearing process," said John Gainer, executive vice president for Digital Check.

The CheXpress CX30 provides a number of new features including two patent-pending technologies for adaptive Magnetic Ink Character Recognition (MICR) and scan and return mode of operation. The CheXpress CX30 represents the first small scanner with the ability to read the varying qualities of magnetic inks produced by desktop check printing applications, including support across printed checks with MICR intensity ranging from 40 to 200 percent. The CheXpress CX30 is also the first scanner in its class to support 300 and 240 dpi scanning in black and white, grayscale and color.

The new scanning device incorporates a number of capabilities designed specifically for the needs of the small and medium business customer. The energy efficient check scanner requires less energy by incorporating lower-power consuming components and provides automatic shutdown capabilities. The device also operates more quietly than typical check scanners.

About Silver Bullet Technology

Pensacola, Fla.-based Silver Bullet Technology is a developer of check scanner software and offers a comprehensive suite of Check 21 solutions and software tools. Silver Bullet works directly with financial institutions, scanner manufacturers and software vendors.
